

# Medtronic's Minimed 670G

The Minimed 670G is a continuous glucose monitoring (CGM) system designed for people with type 1 diabetes. It includes a CGM sensor, a pump, and a smartphone app.

The system uses a CGM sensor to monitor blood glucose levels every 5 minutes. The sensor is inserted into the skin and transmits data wirelessly to a receiver. The receiver connects to a smartphone via Bluetooth.

The smartphone app displays real-time glucose data and provides alerts for low or high blood glucose levels. The app also allows users to program insulin doses based on their meal plans and activity levels.

The Minimed 670G is a closed-loop system, which means it can automatically deliver insulin doses based on glucose levels. This feature is called "closed-loop insulin delivery" or "insulin pump therapy."

The Minimed 670G is a popular choice for people with type 1 diabetes who want a more convenient way to manage their blood glucose levels. It is also a good option for people who have difficulty injecting insulin or who prefer a non-invasive method of monitoring blood glucose levels.

The Minimed 670G is available from Medtronic and other medical device manufacturers. It is a relatively new technology, so there may be some initial costs associated with purchasing the equipment and learning how to use it.

If you are considering the Minimed 670G, it is important to speak with your healthcare provider to determine if it is right for you. Your provider can help you understand the benefits and potential risks of using this technology.

The Minimed 670G is a promising new technology for people with type 1 diabetes. It offers a convenient and effective way to manage blood glucose levels. If you are interested in learning more about this technology, speak with your healthcare provider or contact Medtronic directly.
