

TOWARDS MINING EYE-TRACKING DATASETS FOR EXPERTISE PREDICTION

JENNA WISE

ADVISORS : DR. BONITA SHARIF, CSIS DEPT. AND DR. DAVID POLLACK , MATH & STATS DEPT.

What We explore the feasibility of using eye gaze data to quantify the expertise of software developers during bug fixing tasks.

How Several sequential analysis techniques were used from TraMineR to analyze developer expertise.

Results Can quantify the expertise of software developers during bug fixing tasks that require changing multiple source code elements for a solution.
