Students who attend institutions of higher education obtain a wide range of personal, financial, and other lifelong benefits; likewise, taxpayers and society as a whole derive a multitude of direct and indirect benefits when citizens have access to postsecondary education. Accordingly, uneven rates of participation in higher

education across different segments of US society should be a matter of urgent concern not only to the individuals directly affected, but alsticto put policymakers at the federal, state, and local levels.

This report presents detailed evidence of the private and public benefits of

```

¥ Among parents whose highest degree was a bachelor degree, 68% read to their children daily in 2001 compares to 57% of parents with an associate degree, 47% of parents with some college but no degree high school graduates, and 26% of parents who did not complete high school.

Substantial evidence indicates that the associations described here are the result of increased educational attainment, not just individual characteristics.
